## 1.0 INTRODUCTION

This Data Summary report summarizes initial characterization activities conducted at the request of Building 776/777 Decontamination and Decommissioning personnel at the Rocky Flats Environmental Technology Site (RFETS). Additional sampling will be required to make future environmental restoration action decisions. Under building contamination (UBC) for Buildings 776 and 777 is being addressed under Individual Hazardous Substance Site (IHSS) Group 700-3. Characterization activities conducted in accordance with the Industrial Area (IA) Sampling and Analysis Plan (IASAP) (DOE 2001) and IASAP Addendum #IA-02-08 (DOE 2002).

Sampling activities conducted in accordance with IASAP Addendum # IA-02-08 include two UBC Sites, which are listed in Table 1 and shown on Figure 1. The remainder of IHSS Group 700-3 will be addressed in a separate IASAP Addendum.

No accelerated action decisions were made based on the data collected as part of this project. The subsurface soil risk screen and data quality assessment are not included in this report but these data, their quality, and their impact in the subsurface soil risk screen will be evaluated when additional IHSS Group 700-3 sampling in accordance with IASAP Addendum # IA-03-04 (DOE 2003) is completed.

## 2.0 SITE CHARACTERIZATION

Information for UBC Sites 776 and 777 consists of historical knowledge (DOE 1992-2001) and data obtained from five additional sampling locations. The sampling specifications are described in IASAP Addendum #IA-02-08 (DOE 2002) and are listed in Table 2. The locations of these samples and analytical results for Rocky Flats Cleanup Agreement (RFCA)-regulated compounds greater than background mean plus two standard deviations or reporting limits (RL) are presented on Figure 2. A summary of the analytical results for surface soil is presented in Table 3. Summaries of the analytical results for surface and subsurface soil are presented in Tables 4 and 5. Radionuclide SORs are listed in Table 6 and deviations from planned sampling specifications are presented in Table 7. The raw data are enclosed on a compact disc.

Analytical results indicate that arsenic is above background and the RFCA Tier II action level (AL) at one location beneath Building 777. Additionally, 1,1-dichloroethene (1,1-DCE) was detected at concentrations exceeding the RFCA Tier II AL at two locations under Building 776. All other contaminant concentrations are less than RFCA Tier II ALs. No remedial action decisions are being made based on this initial data set.
